

Peer review of Christopher Pike

By Brandon Benson

Content:

The presentation was very informative. He focused on concepts rather than technical details, allowing the audience to immediately connect with his story. He maintained control the audience, asking questions from time to time. He used his slides well, and brought props. The content on each slide was clear. He passed around silicon wafers that showcased his work. He utilized these props well by incorporating them in his explanations.

Preparation:

He had a good posture, tone of voice, and eye contact throughout the entire presentation. I was very engaged in his story. He presented using only one technical equation, but still conveyed the concepts of capacitors. He also gave away a prize at the end which kept the audience excited and involved in his presentation.
