

Peer Review of Maxwell Lee

Alex Gibson

August 21, 2015

My reviewee's title presentation was on Tower Testing and Development for CDMS SNOLAB. He made good eye contact and was fairly engaging, although his topic was very primarily circuit based and I haven't taken an E and M course I was still able to follow along well. I think this means he did a good job simplifying it. The organization and visual aide's were good and adequately explained. The whole time everything he seemed in control and focused. He made good eye contact and managed to keep most of the room engaged albeit his material is very specific and complicate.
