## Question

Y/N?

## Notes

### CONTENT:

• INFORMATIVE?

✓+

"big picture"/  
good background info on Greenhouse Effect  
Definitely packed in a lot of good explanations!

• FOCUSED?

✓

Definitely had a clear focus. I feel you could have ~~introduced~~ <sup>introduced</sup> your "thesis" / the actual experimentation a bit earlier in the presentation though!

### ORGANIZATION:

• ORGANIZED?

✓

Logical order ✓

• WELL-PRESENTED?

✓

Great speaker + easy to listen to / follow.  
Felt a bit long because so much info was presented

• GOOD VISUAL AIDS?

✓+

~~Good~~ Good use of pictures + arrows to show different concepts, helpful in visualizing both molecules + chemical reactions.

### SPEAKER:

• PREPARED?

✓+

For sure. Pretty smooth + confident presenter!  
Clearly very knowledgeable!

• IN CONTROL?

✓

Good job with answering questions, too.  
One suggestion: tendency to speak quickly can make you sound rushed / nervous, so remember to also slow down + relax 😊

• EYE CONTACT?

✓

Eye contact was there, but could do more / look @ audience more often + at the screen or projected slides less.

• ENGAGING?

✓

Good volume, a good balance between technical and accessible. Overall, very engaging and high-quality presentation!
